

5 October 2011

To whom it may concern,

Green Wave Automation was selected to design, install and commission an energy management solution for Lafarge's new head office in Johannesburg.

The system consists of the following:

- 231 occupancy sensors to control all lights, so lights are only on while areas are occupied
- BMS system to control and monitor key utilities within the building
 - Power metering
 - HVAC
 - Generator
 - Lighting
 - Temperature control
 - Fire systems
- Boardroom automation in our 5 main boardrooms, to ensure rooms are presentation ready at a press of a button.

The installation by Green Wave Automation was completed successfully in December 2010. Their after service has been excellent and I do not hesitate in recommending their services to any company.

Yours faithfully

Elsa Fourie
Office Manager

Lafarge Industries South Africa (Pty) Limited
